

Carmen Rubio, PhD.

Trained in Science and Embryology in the University of Valencia, Spain, Dr Carmen Rubio got her Master degree in Human Reproduction and Infertility at the University of Valencia, and specialized in cytogenetic studies in human reproduction at the University of Barcelona.

She completed her PhD in the field of Reproductive Genetics and post-doctoral research included research in male and female meiosis at the laboratory of Drs. Patricia Hunt and Terry Hassold (Washington State University, USA).

She has been working in the field of Embryology and Reproductive Genetics for more than 30 years. She has published more than 100 papers in the main peer-reviewed specialist journals in the field, books chapters as well as numerous lectures at conferences worldwide.

Currently she is the head of the Research & Development department at Igenomix (Vitrolife group). Her main research interests are non-invasive approaches of embryo aneuploidy and understanding the origin of cell-free DNA in the culture medium.
